

# Trocar nome e ícone do App

# Nome e ícone do App

- Quando abrimos a aplicação NaLista temos o seguinte nome e ícone visíveis:

# Trocando o ícone

- Para trocar o ícone precisaremos de mais um plugin. Desta vez utilizaremos o plugin **icons\_launcher**.
- A documentação desse plugin pode ser obtida em:  
[https://pub.dev/packages/icons\\_launcher](https://pub.dev/packages/icons_launcher)
- Inicialmente colocamos as dependências no arquivo **pubspec.yaml** e fazemos o **pub get**.
- Também é necessário fazer essa configuração no pubspec.yaml:

dev\_dependencies:

flutter\_test:

sdk: flutter

flutter\_test: ^2.0.0

icons\_launcher: ^3.0.2

firebase\_auth: ^5.3.1

cloud\_firestore: ^5.4.4

email\_validator: ^3.0.0

icons\_launcher:

image\_path: "assets/icon/icone\_aplicacao.png"

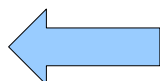

platforms:

android:

enable: true

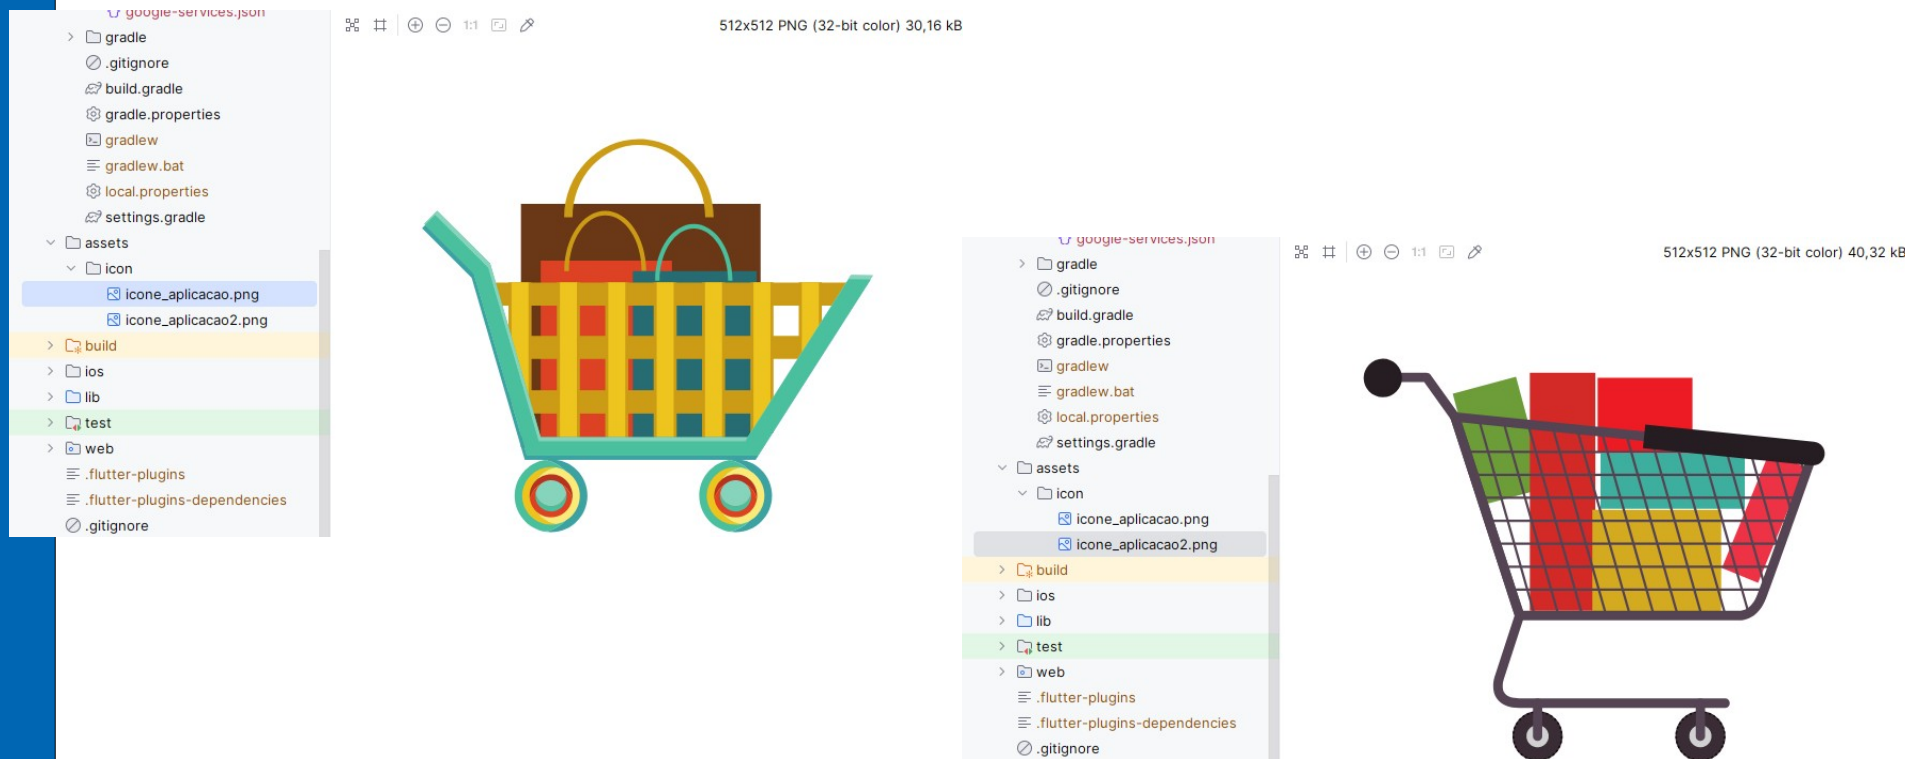

ios:

enable: true

# Trocando o ícone

- Atualmente a imagem da aplicação é `icone_aplicacao.png`. Vamos trocar para `icone_aplicacao2.png`.

# Trocando o ícone

- O primeiro passo é mudar o arquivo apontado:

```
icons_launcher:  
  image_path: "assets/icon/icone_aplicacao2.png"  
  platforms:  
    android:  
      enable: true  
    ios:  
      enable: true
```

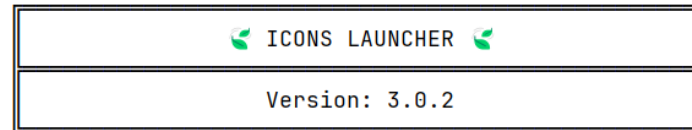

- Depois é necessário utilizarmos os comandos abaixo para obtermos a atualização do ícone:

flutter clean

flutter pub get

dart run icons\_launcher:create

```
PS C:\Users\Giovany\AndroidStudioProjects\nalista2> dart run icons_launcher:create  
Building package executable... (1.5s)  
Built icons_launcher:create.
```

```
🌱 Creating Android icons...  
  ✓ Generated launcher icon images  
  ✓ Updated android manifest launcher icon  
🌱 Creating iOS icons...  
  ✗ App icon for iOS/iPadOS not support alpha channel  
  ✓ Removed alpha channel from icon  
  ✓ Generated app light icons  
  ✓ Generated `Contents.json` file
```

==> 🎉 GENERATE ICONS LAUNCHER SUCCESSFULLY 🎉 <==

Give a 🍌 on Pub.dev [https://pub.dev/packages/icons\\_launcher](https://pub.dev/packages/icons_launcher)  
Give a ⭐ on GitHub [https://github.com/mrrhak/icons\\_launcher](https://github.com/mrrhak/icons_launcher)

♥️ THANK YOU! ♥️

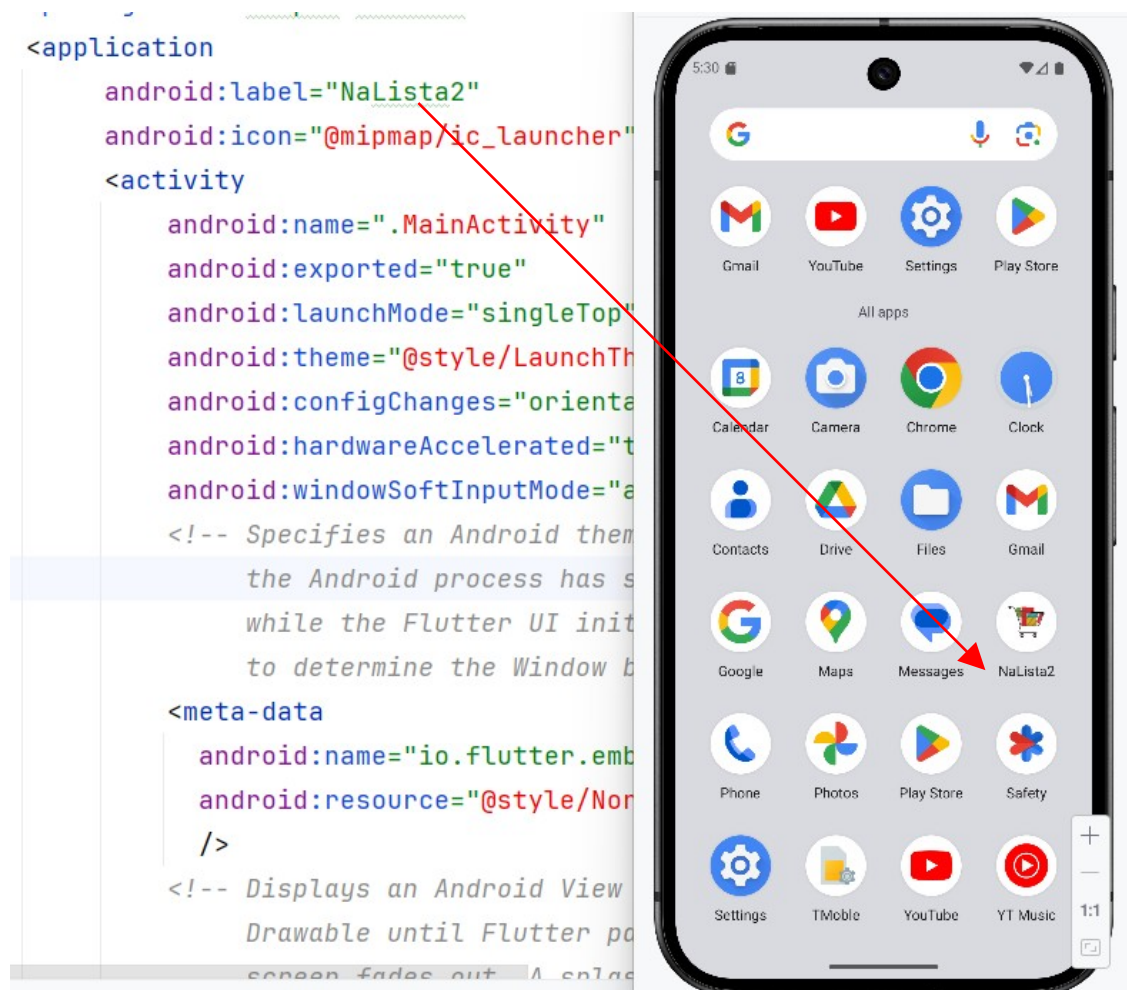

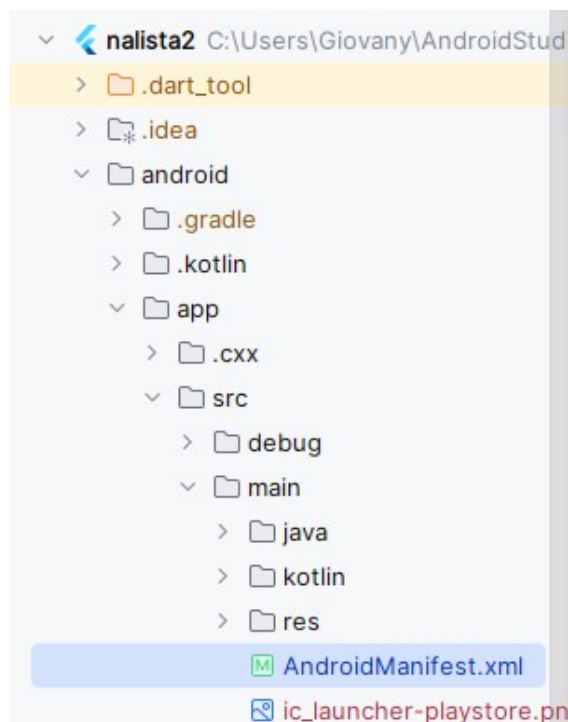

# Trocando o ícone

- Após o recarregamento do aplicativo (que deve demorar um pouco) temos o seguinte resultado:

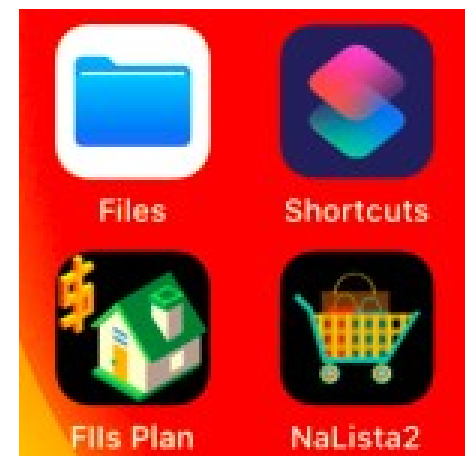

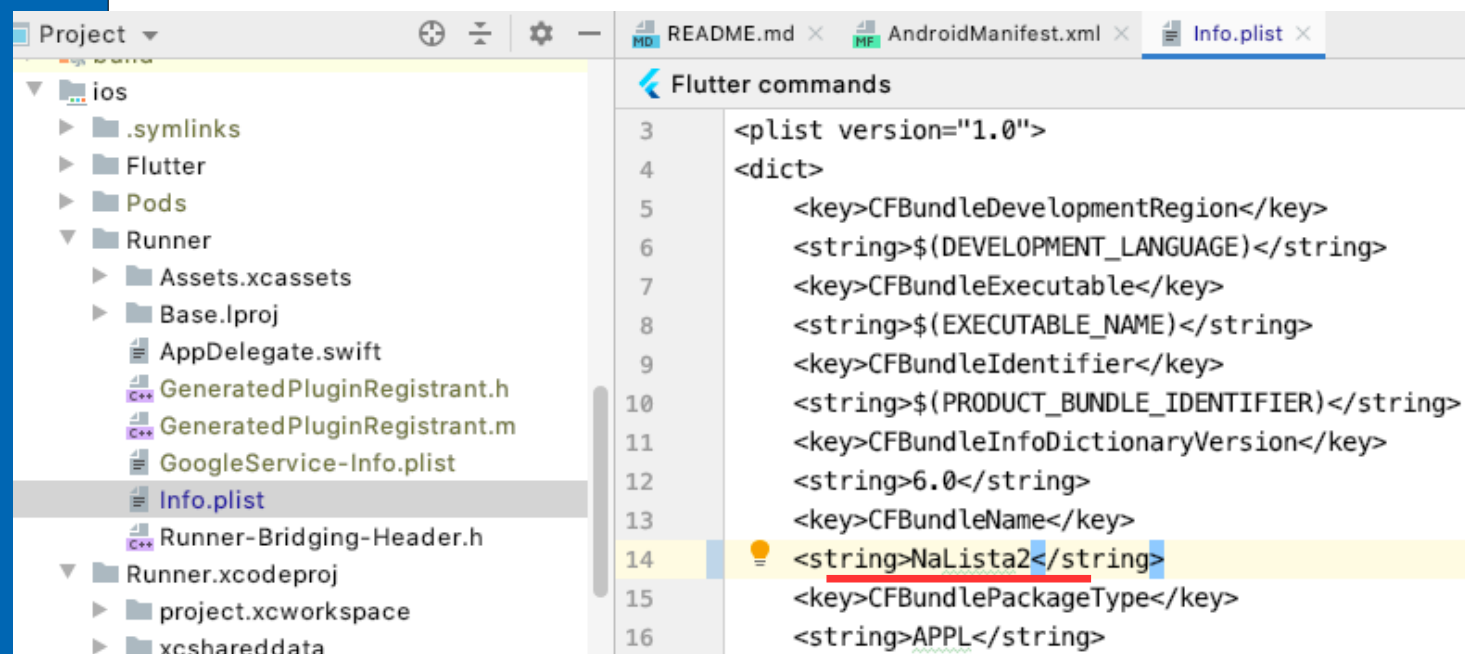

# Trocando o nome do aplicativo

- Para trocar o nome do aplicativo no Android basta mudar a tag **android:label**, do arquivo **AndroidManifest.xml**, para o texto desejado.

# Trocando o nome do aplicativo

- Para trocar o nome do aplicativo no iOS basta mudar a tag **CFBundleName**, do arquivo **info.plist**, para o texto desejado.

# Dúvidas?
